1. Introduction

An internship is a professional program designed to provide students with real-world workplace experience, acting as a bridge between academia and the industry. It allows interns to transform theoretical academic knowledge into practical industry-level expertise. This proposal outlines a three-month internship at Code IT, an organization established in 2017 focused on software development and inspiring youth.

1.1. Problem Statement

Currently, the Code IT Student Portal is limited to a web-based interface and lacks a dedicated mobile presence. To enhance user accessibility and provide a seamless experience for students on the move, there is a critical need for a cross-platform mobile application supporting both Android and iOS platforms. This project aims to solve that accessibility gap through modern mobile development.

1.2. Objectives

The primary objectives of this internship are aligned with gaining professional-grade technical and soft skills:

- To develop the technical skills required to work as a proficient Flutter developer.
- To gain hands-on experience by working on a live project within a professional IT environment.
- To understand the methodology and lifecycle involved in developing, testing, and deploying mobile applications.
- To learn the importance of teamwork and professional collaboration in a remote setting.

2. Description of internship work

I will be serving as a Mobile App Developer (Flutter) Intern within the Mobile App Development Department at Code IT. My work will focus specifically on the development of the Code IT Student Portal mobile application. Using the Flutter

framework and Dart programming language, I will be responsible for building UI components, integrating APIs, and ensuring cross-platform compatibility for Android and iOS. I will work under the guidance of a supervisor to contribute to the organization's existing software infrastructure and product goals.

3. Internship plan

As per the internship offer letter from Code IT, the plan is as follows:

- **Duration:** 3 Months (April 12, 2026, to July 12, 2026).
- **Work Format:** Remote (Work from Home).
- **Timing:** Flexible working hours, centered on meeting project milestones and task completion.
- **Supervision:** All technical activities and progress will be supervised by Er. Sajal Shrestha (CEO/Founder).

4. Expected outcome of internship activities

Upon the successful completion of this internship, the following outcomes are anticipated:

- Acquiring the technical proficiency needed to qualify for a junior-level Flutter developer position.
- A comprehensive understanding of the full mobile development lifecycle.
- Practical experience in professional remote collaboration and task management.
- The successful delivery of functional modules for the Code IT Student Portal mobile app.
